DNA fragments useful for increasing p53 activity in a cell and reducing susceptibility to UV-induced hyperproliferative diseases.

Claim 11; Page 30; 44pp; English.

AAZ10692-97 represent DNA fragments that are used for increasing p53 activity in a cell. The oligonucleotides are are UV mimetics and protect cells against subsequent exposure to UV-irradiation or chemicals. The oligonucleotides are useful for increasing p53 activity in a cell, reducing the susceptibility to UV-induced hyperproliferative diseases, treating psoriasis, vitiligo, atopic dermatitis, allergic rhinitis, conjunctivitis, and UV-induced dermatcses, reducing photoaging and reducing susceptibility to skin cancer

The compounds, which have cytostatic, anti-allergic, anti-inflammatory, dermatological, ophthalmological, anti-psoriatic and immunosuppressive activities, function as 'ultra-violet mimics' to induce DNA repair processes (or a protective response to later exposure to radiation or chemicals), as a proliferation inhibitor, apoptosis inducer or tumour necrosis factor inhibitor. Probably they mimic products of DNA damage, or processed DNA-damage intermediates, by inducing the p53 pathway, resulting in transient arrest of cell growth, allowing more time for DNA repair to occur before cell division takes place. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 especially used to treat carcinoma but may also be used to: treat other hyperproliferative states (e.g. psortasis or precancerous conditions); reduce photoacing, oxidative stress or damage; prevent skin cancer; treat allergically mediated inflammation (atopic or contact dermatitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      allergic rhinitis and conjunctivitis); prevent or reduce DNA damage in cells caused by radiation or chemicals; increase melanin production (pigmentation) in epithelial cells (e.g. for treating vitiligo), and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting proliferation of epithelial cells, useful e.g. for treating carcinoma, using specific oligonucleotides that mimic the effects of ultra-violet light.
                                                                                          Gaps
                                                                                          .

oligonuclectides that contain non-hydrolyzable backbones are used to inhibit apoptosis, in response to DNA damage, in epithelial cell. This sequence is melanogenesis associated oligonucleotide #8, a synthetic peptide that resembles the fragment excissed during excision repair of Thymine dimers and one of the oligonucleotides used to inhibit mammalian epithelial cell proliferation, described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting growth of cancer cells and inducing apoptosis in cancer cells, by administering composition having oligonucleotides that share sequence identity with human telomere overhang repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Telomere; ss; probe; cytostatic; human; antipsoriatic; dermatological; apoptosis; cancer; p53; epithelial cell proliferation; DNA damage; lymphoma; osteosarcoma; melanoma; leukaemia; cervical cancer; squamous cell carcinoma; surface antigen; MART-1; tyrosinase; TRP-1; gp-1100; hyperproliferative disorder; spongiosis; blistering; dyskeratosis; skin cancer; xeroderma pigmentosum; seborrheic keratosis; actinic keratosis; Bowen's Gisease; basal cell carcinoma; psoriasis; atopic dermatitis; breast cancer; lung cancer; liver cancer;

                   The invention relates to inhibiting growth of cancer cells, which is independent of presence or activity of telomerase in cells, not requiring the presence or activity of p53 normal function in cells, not requiring the presence or activity of p53 normal function in cells, or resulting in 5-phase arrest in cells, and inducing apoptosis in cancer cells, involving administering a composition comprising oligomucleotides which share at least 50% sequence identity with human telomere overhang repeat, (TTAGG)n. The composition may contain 2 of the oligomucleotides (or their contiguous portion) and is used in a method inhibiting proliferation of epithelial cells in a mammal or preventinglyreducing DNA damage in cells of a mammal, where the DNA damage is caused by radiation or DNA-damaging chemicals. The method is useful for inhibiting growth of cancer cells chemically lymphoma, osteosarcoma, melanoma, leukaemia, cervical cancer, squamous cell carcinoma), for inducing apoptosis in cancer cells in human, promoting differentiation of malignant cells in a mammal in ammmal in ammmal in ammmal in the context cells in the context of the contex
                                                                                                                                                                                                                                                                                                                                                                                                                                                             enhancing the expression of one or more surface antigens (e.g. MART-1, tyrosinase, TRP-1 or gp-1100) indicative of differentiation of cancer cells (especially melanoma cells) in a human and for treatment of other hyperproliferative disorders (e.g. spongiosis, blistering or dyskeratosis in the skin of a mammal, skin cancer in a human with xeroderma pigmentosum, seborrheic keratosis, actinic keratosis, Bowen's disease, or basal cell carcinoma) and for treating or preventing pre-cancerous conditions affecting epithelial cells (such as psoriasis and atopic dermatitis) and also the types of cancers of breast, lung, liver, prostate, pancreatic, ovarian, bladder, uterine, colon, brain, oesophagus, stomach, and thyroid. The present sequence is a melanogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antipsoriatic, dermatological, cancer, apoptosis, skin cancer,

The invention relates to inhibiting growth of cancer cells (which is independent of the presence or activity of telomerase in cells) not requiring the presence or activity of telomerase in cells) not requiring the presence or activity of ps3 normal function in cells, or requiring the presence or activity of ps3 normal function in cells, or resulting in S-phase arrest in cells, and inducing apoptosis in the cancer cells, comprising administering a composition comprising cliquous clotides which share at least 50% sequence identity with human telomere overhang repeat (TTAGG)n. The method also involves promoting differentiation of malignant cells in a mammal, enhancing the expression of one or more surface antigens indicative of differentiation of cancer cells in a human, by administering the oligonucleotide. The oligonucleotide further administered to enhance repair of uv irradiation-induced danage to the skin in a human, reduce oxidative admands in the composition comprises oligonucleotides such as pagaranced, portace, portaced profit or comprises oligonucleotides such as physiological carrier. Oligonucleotides such as physiological carrier. Oligonucleotides such as physiological carrier. Oligonucleotides such as pracedadGAT praced and proceeding allowed is useful for inhibiting proptosis in cancer cells, pervented cancer, squamous cell carcinoma, melanoma, leukaemia, cervical cancer, squamous cell carcinoma, in a human, promoting differentiation of malignant cells in a mammal and enhancing the expression of one or more surface antigens (e.g. MART-1, tyrosine, TRP-1 or gp-1100) indicative of differentiation of cancer cells, especially melanoma cells, for inhibiting proliferation of epithelial cells in a mammal, where the cells are epithelial cells in enammal, where the cells are epithelial cells. The composition is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seborrheic keratosis, actinic keratosis, Bowen's disease, squamous cell actionan or basal cell carcinoma. The method is useful for treating or preventing pre-cancerous conditions affecting epithelial cells such as psoriasis and atopic dermatitis, and also the types of cancers of breast, lung, liver, prostate, pancreatic, ovarian, bladder, uterrine, colon, brain, oesophagus, stomach, and thyroid. The present sequence is a oligonucleotide with homology to the telomere PTPT sequence shown to
                                                                                                                                                                                                                                                                      Inhibiting growth of cancer cells and inducing apoptosis in cancer cells, by administering composition having oligonucleotides that share sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      preferably useful for treating a hyperproliferative disorder in human. A composition comprising pGAGTATGAG and pTT, is useful for preventing spongiosis, blistering or dyskeratosis in the skin of a mammal, following exposure to UV light, reducing the occurrence of skin cancer in a human with xeroderma pigmentosum or for enhancing repair of UV irradiationinduced damage to skin in a human, treating melanoma and reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Multiple cloning site for retroviral vectors #1.

```
The invention relates to a retroviral vector comprising 5' to 3' and in perable linkage, a 5' long terminal repeat (LTR), a splice donor, a packaging sequence, a gag open reading frame (ORF) mutated to reduce translation of gag peptides, a splice acceptor, a start codon in frame infections viral particle comprising transfecting the retroviral vector into a retroviral packaging cell line under conditions to produce the viral particle, and recovering the viral particle, a packaging cell into a retroviral vector, introducing a transcription unit into a cukaryotic cell comprising the retroviral vector, introducing a transcription unit into a cukaryotic cell comprising the retroviral vector, a packaging cell composition comprising the retroviral vector, a packaging cell composition comprising the retroviral vector, a packaging cell composition comprising the retroviral vector, a caukaryotic cell infected by the viral particle and a carrier, diluent, adjuvant or excipient. The vector is useful in expressing a retroviral cell for treating genetic disorders or diseases induced by pathogens such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cell for treating genetic disorders or diseases induced by pathogens such as cancer or virally induced disease. The methods are useful for preparing the retroviral vector. The vector provides high titre efficient expression of foreign genes, and safety. The present sequence is a multiple cloning site suitable for inclusion in the vectors of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A new Moloney Murine Leukemia Virus-based retroviral vector, designated as LUV, useful for expressing a retroviral cell for treating genetic disorders, or diseases induced by pathogens such as cancer or virally-induced disease.
                                                                                                                                                                                                                                                                              ds; long terminal repeat; LTR; gag; cytostatic; multiple cloning site; envelope protein; retroviral vector; cancer; virally-induced disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      76.0%; Score 15.2; DB 6; Length 42; 85.0%; Pred. A new Moloney Murine Leukemia Virus-based retroviral vector, designated as LUV, useful for expressing a retroviral cell for treating genetic disorders, or diseases induced by pathogens such as cancer or virally-

Example 1; Page 13; 50pp; English.

induced disease.

The invention relates to a retroviral vector comprising 5' to 3' and in operable linkage, a 5' long terminal repeat (LTR), a splice donor, a packaging sequence, a gag open reading frame (ORF) mutated to reduce translation of gag peptides, a splice acceptor, a start codon in frame translation of gag peptides, a splice acceptor, a start codon in frame confine to but a particle comprising transfecting the retroviral vector into a retroviral packaging cell line under conditions to produce the viral particle, and recovering the viral particle, a packaging cell comprising the retroviral vector, introducing a transcription unit into a cukaryotic cell comprising the retroviral vector, a packaging cell comprising the retroviral vector or the viral particle and a paramaceutical composition comprising the retroviral vector, a call infected by the viral particle, and a carrier, diluent, adjuvant or excipient. The vector is useful in expressing a retroviral cell for treating genetic disorders or diseases induced by pathogens such a cancer or virally induced disease. The methods are useful for preparing the retroviral vector provides high titre, efficient expression of foreign genes, and safety. The present sequence is a multiple cloning site suitable for inclusion in the vectors of the

Method for detecting nucleic acid - using nucleic acid probe and PCR amplification.

WPI; 1995-069323/10.

Example 1; Page 4; 9pp; Japanese.

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression confident nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated prolypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a
                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
AAQ84036-Q84040 are oligonucleotide fragments of the plasmid pUC19, they were used in the construction of the plasmid to demonstrate a new method of DNA detection

  compound active on a target of a bacteriophage inhibitor protein in a bacteria is used to treat or prevent a bacterial infection in an animal. AAA68243 to AAB16523 to AAB16524 represent bacteriophage nucleotide and protein sequences which are used in the exemplification of the present invention. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (RAM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunoderection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents one of 5191 Staphylococcus aureus DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Computer readable medium; vaccine; S.aureus infection; immunodetection; cellulitis; eyalid infection; food poisoning; osteomyelitis; therapy; skin infection; surgical wound infection; scalded skin syndrome; toxic shock syndrome; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polynucleotide (s) and proteins derived from Staphylococcus aureus stored on computer readable medium and used in the production of anti-

primers DK15 (AAT29050) and DK16 (AAT29051) were used for the PCR amplification of the ribosome binding site and signal peptide coding regions of the Bacillus stearothermophilus maltogenic alpha-amylase gene in pDNS20. The PCR product was used to construct pPFF1, which also carried a gene (AAT29043) for Oerskovia xanthineolytica beta-1,3-glucanase (AAR97362). Transformation of Bacillus subtilis strain DN1885 or protease-deficient strain ToC46 allowed prodn. of the Oerskovia lytic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
                                                                                                                                                                                                                                                                                                                                                                                                                               Human; 5' BST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      procedures.

Thorea—Torgan: inmature ears; Site 1: Xba I; Site 2: Xba I;
The vector was digested with XbaI and one nucleotide was added by fill in in the recessive 3' end. The genomic DNA was nebulized, end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were close, or 8 and 3 kb and were closed in the vector (.X/Y reads in Mi3mpl9, .b/g reads in pUCl9). The same ligation was transformed in either JMIO7 or DH5a. "

Sequence 6, Application US/09535851A

Parent No. 6528636

GENERAL INFORMATION:
APPLICANT: Battelle Memorial Institute
TITLE OF INVENTION: A Promoter Sequence of 3-Phosphoglycerate Kinase Gene 2 of Lactic
TITLE OF INVENTION: A Producing Fungus Rhizopus Oryzae and a Method of Expressing a Ger
TITLE OF INVENTION: in Fungal Species
TITLE OF INVENTION: in Fungal Species
FILE REFERENCE: E-1891B
CURRENT APPLICATION NUMBER: US/09/535,851A
CURRENT FILING DATE: 2000-03-27
NUMBER OF SEQ 1D NOS: 9
SOFTWARE PATENT OF NOS: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Lalgudi, Raghunath V.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
